

# Caltech sustainability

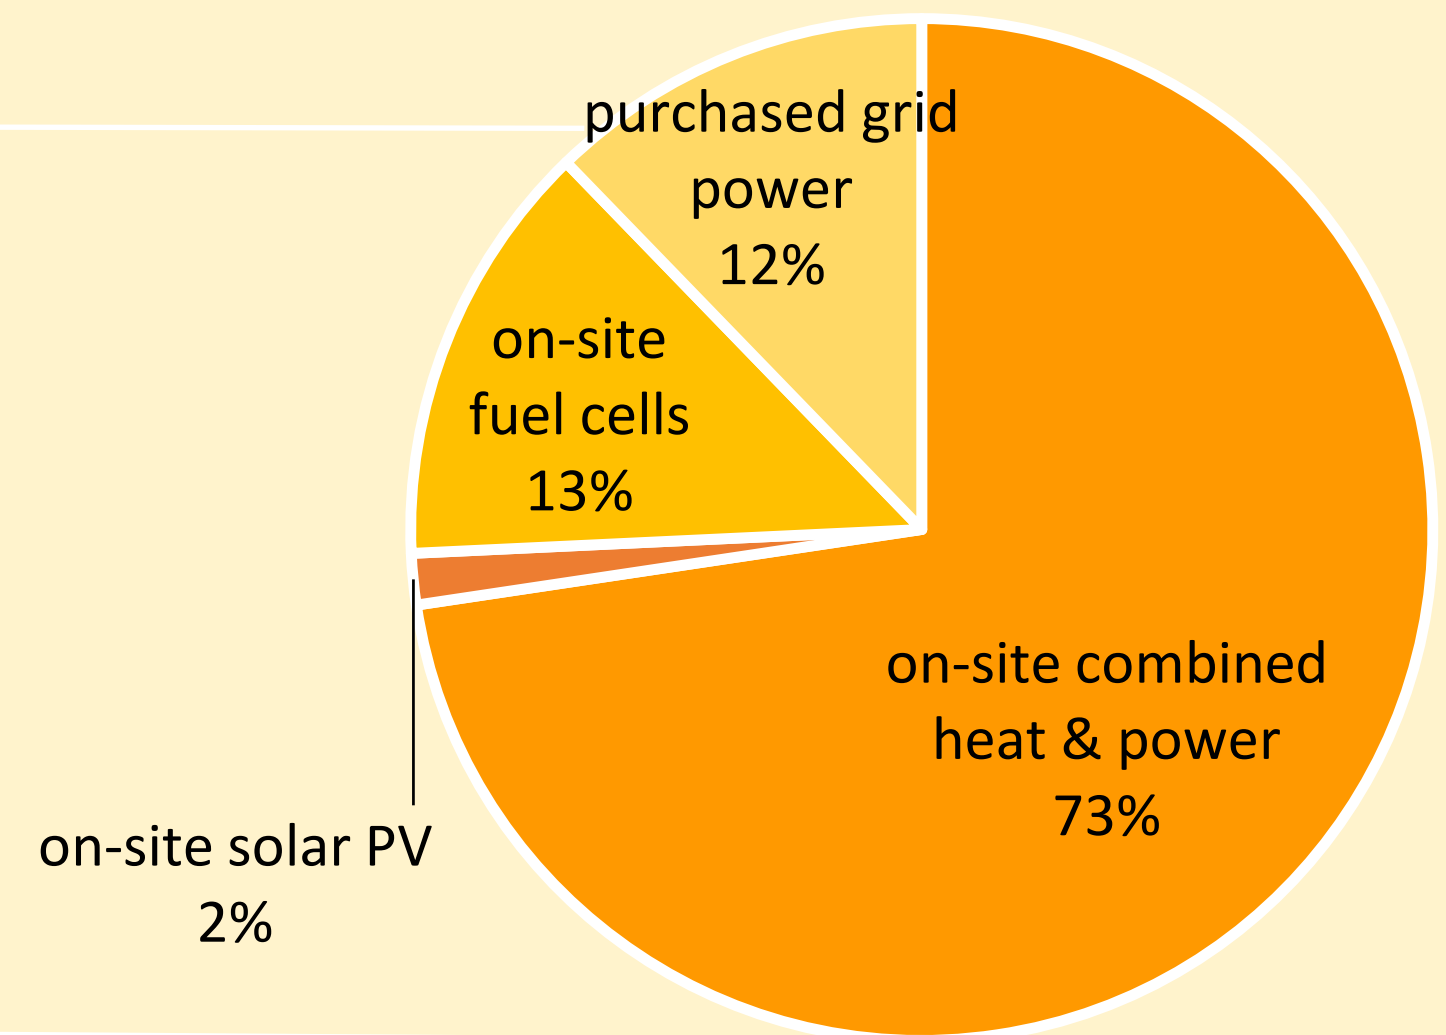

## energy

Identify and recommend sources of high quality, reliable, and environmentally preferable energy to support research and education while working with the campus community to improve efficiency and reduce demand.

historic electricity consumption by source

2015 electricity portfolio

In FY2015, the Institute installed an additional megawatt of on-site fuel cells, increasing the amount of electricity generated on-site to 88 percent. Continued investment in energy efficiency measures continued to hold total electricity consumption flat. However, energy intensity increased by 5 percent due to increased natural gas purchases for on-site combustion.
