Identify and recommend sources of high quality, reliable, and environmentally preferable energy to support research and education while working with the campus community to improve efficiency and reduce demand.

historic municipal solid waste by source

2016 on-campus recycling

In FY2016, the Institute diverted 34 percent of its waste from the landfill from on-campus recycling, with an additional 36 percent of campus waste processed for recycling after leaving campus. Additionally, the Institute began to implement a streamlined, comprehensive recycling program in FY2016 that is designed to make recycling easy and intuitive to use. As the program is rolled out to the entire campus, the Institute will measure its impact on the diversion rate.
