Retro-commissioning (RCx) is a systematic, documented process that identifies operational and maintenance improvements in existing buildings to optimize existing system performance. The process examines all energy-using equipment including mechanical, lighting and related controls. Annual savings per building can range from $40,000 - $100,000.

**Mechanical / Lighting**
A more stream-lined process than full RCx focusing on low-cost, quick payback mechanical and lighting systems upgrades. Annual savings per building can range from $10,000 - $40,000.

**Lighting**
Existing lighting retro-fits utilizing high-efficiency LED and hi-bay lights. Annual savings per building can range from $5,000 - $8,000.

**Completed Projects**
